

Create a new model Named **Department** with the following properties:

Long Id

String Name

String Description

Int FloorNumber (Optional)

Then create a new controller Named **DepartmentsController** with the following methods:

Type	Name	Parameters	Description
Get	GetAll	String Name (optional)	Returns all departments with the ability of filtration.
Get	GetById	Long Id	Returns one department based on Id parameter.
Post	Add	DepartmentDto	Add new department.
Put	Update	DepartmentDto	Updates the values of an existing department.
Delete	Delete	Long Id	Deletes a department.
