

- Write a query that returns each **department** and the number of **employees** under each department using **group by**.
- Columns.
  - DepartmentId
  - DepartmentName
  - EmployeesCount

**Answer :**

```
select
departments.Id as DepartmentId,
departments.Name as DepartmentName,
Count(employees.Id) as EmployeesCount
from departments
left join employees on departments.Id = employees.departmentId
group by departments.Id, departments.Name
```
